

## *A Mini-Lunch of TNT™, H.E.S.™, Dyna-Spark™ and Dyna-Pro™ Help to Re-Energize on a Trail Ride!*

*Submitted by Kit Link, DYNAMITE® Distributor, CO*

I have been using and praising DYNAMITE® products for 10 years. The most recent success I have had has been with the TNT™. My Morab had trouble with anything sugar related. After using TNT™ he is a changed horse -- relaxed but full of energy instead of jittery and jiggy. As suggested by my sponsors, Rowan Emrys and John Hanna, I prepare a "mini lunch" for him when we trail ride for more than 2 hours (see below).

My horse can't wait to eat his lunch which I carry in a small plastic baggy. He licks the bag clean and he used to be afraid of plastic bags! Afterward we leave the lunch-stop refreshed and energized, but not jiggy, and with enough in him to go on and on. We just finished a 4-day ride and he was the talk of the group who knew him pre-TNT™ and pre-lunch. I cannot tell you how much this has made my ride more enjoyable.

Thank you Rowan, John and DYNAMITE®.

**Rowan drew up this "mini-lunch"  
menu for me:**

**1/2 cup H.E.S.™  
2/3 cup TNT™  
1/2 oz. Dyna-Spark™  
1 pump of Dyna-Pro™**

## *The Grinch That Almost Stole Christmas!*

*Submitted by Susan Glave, DYNAMITE® Director, ID*

The Grinch that almost stole Christmas came disguised as a box of Chukar Cherries (dried cherries dipped in a sinfully rich dark chocolate.) Its accomplice was a four-year-old Lakeland terrier with a lust for sweets. This particular dog is extremely athletic, enough so that a closed box of candy, on top of a high dresser, posed little challenge. Luckily my son noticed quickly the dog had consumed the entire box of candy -- enough chocolate to be a potentially lethal problem. I put in a call to our vets answering service, but of course on the evening of December 25th, the chance of seeing a real live vet is about equal to the chance of seeing Santa Clause winging his way back to the north pole. Luckily I have a container of activated Miracle Clay in the fridge for such occasions. I gave the dog about a half teaspoon of activated clay, just stuck it to the roof of her mouth like it was peanut butter. I also gave her 14 drops of Dyna Pro to ward off digestive upset. I repeated this process every two hours until she had consumed about a tablespoon of clay.

The dog never experienced any problems from eating the 4 oz dose of chocolate. The vet predicted there would be irreversible liver damage. The dog is eleven-years-old now, and still going strong with no sign of liver impairment or any other ill effects one might expect to see from such a close call with the "chocolate grinch." I am convinced had it not been for the Miracle Clay we would not have a happy, healthy, energetic Lakeland terrier today.
