

The Best That Mother Nature Can Offer is a 'Turkey Trot Rare Breed' on DYNAMITE®!

Dear DYNAMITE®,

I have heard it said that DYNAMITE® products can bring out the best that Mother Nature has to offer. This year I've seen that statement come true. I breed rare Fell ponies and in June Turkey Trot Fire Willow was born. He is his dam's fifth foal and has one full sibling who is still on my farm. From my first sight of him about fifteen minutes after birth, I felt he was something special. And now that I've seen four of his five siblings and half siblings, I can easily say he's the best thing his dam has thrown so far.

Beauty has been on DYNAMITE® products since she arrived in my care almost three and a half years ago. Right now she regularly gets **Dynamite Plus™**, **Dyna-Pro™**, and all four free choices (**1 to 1**, **2 to 2**, **Izmine™** and **NTM Salt™**), as does Willow's father. They also get quarterly **Herbal Tonic™**. Beauty has on occasion also had **Dyna-Spark™**, **Cell Mend**, **Trace Mineral Concentrate**, **Solace™**, **Super Stress™**, **Breeder Pac™**, **Herbal Green™**, **Excel™**, and **Pelleted Grain Ration**. Beauty looks better every year, and coming seventeen, that's saying something for a pony that flew over from England as a four-year-old!

In addition to my Fell ponies, I use DYNAMITE® products on my draft ponies, rare breed ducks and me. I recently rescued an Australian Shepherd, and friends have been amazed at how quickly I was able to bring Sadie to bright good health from an underweight, matted, flea-infested start. I credit **Dynamite®** **Chicken Meal and Rice Dog Food**, **Dyna-Pro™**, and regular baths with **Dynamite® All-Natural Shampoo**. Thanks DYNAMITE®!

Best regards,

Jenifer Morrissey

Turkey Trot Rare Breeds is dedicated to stewarding rare breeds and putting them to use. It is our belief that by demonstrating the utility of these livestock breeds, we can ensure their survival into the future.

We have had Fell Ponies since 2000. Our goal is to raise and train them in an environment as close to their native fellows as possible. When the ponies are not on pasture, we feed grass hay and use DYNAMITE® supplements for vitamins and minerals. We utilize natural horsemanship techniques in training and keep the ponies in herd situations as much as possible, including the stallion.
