

## Horses

**Breeder Pack™** is for mares & stallions, but especially problem breeders and retired race horses that have been given blood builders. It should be fed with DYNAMITE® and best results will be obtained by feeding at least 60 days before breeding and continuing through gestation. At least one year before conception is ideal.

During this critical time, Mom will also need plenty of additional minerals. This means, having plenty of **Free Choice Mineral (Izmine, NTM Salt, 1 to 1 and 2 to 1)** available.

**Dyna-Spark™ for Horses** is a revolutionary product which balances the mineral deficiencies and muscle

imbalances resulting from strenuous work...including delivery.

**Easy Boy™** is a supplement of chelated magnesium, B vitamins and herbal nutrients for horses experiencing stress. Many horse owners like to start their mares on **Easy Boy™** a few weeks before the expected foaling date to supply extra magnesium and B-vitamins for labor.

**High Energy Supplement (H.E.S.)™** is a supplement high in fat and protein for lactating broodmares and growing horses. It provides the extra fat and calories needed for lactation and vital for the first 3 months of a foal's life.

## Dogs

**Showdown® Breeder Formula** provides maximum nutrition for pregnancy and lactation. The milk-based formula provides more of what mom needs to build correct bone, more consistent litter size, rich colostrum and healthy digestive flora. Breeding animals will benefit from the extra hormonal support. Bitches often cycle more consistently with **Showdown™ Breeder Formula**.

**Dyna-Spark™ for Dogs** provides electrolytes, trace minerals, vitamins and amino acids to dogs and other small animals whose electrolytes have been compromised due to delivery, lactation and the everyday stress of motherhood!

"I just wanted to thank you for your wonderful DYNAMITE® products. Overall health became a huge reality to me several years back when I had my first two litters of puppies. Mom's first litter was 10 pups and her second and last was nine. I fed her DYNAMITE® Showdown throughout her pregnancy. The vet said at the time, he had never seen healthier puppies! Our dogs are fed DYNAMITE® from at least a year on and have had also had good hip clearances. A huge thanks to you for developing such a fine product." —Marianne Clifford, AZ

"A female in our Alpaca herd was having difficulty holding a pregnancy. She would repeatedly test as pregnant for a short time and then be open again. She started on DYNAMITE® and after about 6 weeks was bred successfully. She continues to hold her pregnancies and is feeling so frisky and free in her joints that she is dancing around on her hind feet!"  
—Diane Shaw, CO

"I have heard it said that DYNAMITE® products can bring out the best that mother nature has to offer. This year, I've seen that statement come true. I breed rare Fell ponies and in June, *Turkey Trot Fire Willow* was born. He is his dam's fifth foal and has one full sibling who is still on my farm. From birth, I felt he was something special. And now that I've seen four of his five sibling and half siblings, I can easily say he's the best thing his dam has thrown so far. Beauty has been on DYNAMITE® products since she arrived in my care almost three and a half years ago. Right now, she regularly gets **DYNAMITE® Plus**, **Dyna-Pro™**, and all four **Free Choice Minerals**, as does Willow's father. They also get quarterly **Herbal Tonic™**. Beauty looks better every year and coming seventeen, that's saying something for a pony that flew over from England as a four year old."

Thanks DYNAMITE®!  
Jenifer Morrissey, Supervisor, CO

## Multi-Species

**Trace Minerals Concentrate** is a concentrated blend of a wide variety of macro and micro-trace elements in colloidal form. It is not balanced for daily & consistent use, but is proven safe during pregnancy if used temporarily. It can help internally in supporting immune systems challenged by colds, flu, vaginal or uterine infections and such. Placed topically on torn tissue, it can stop bleeding in seconds.

**Tranquil™** is also a natural flower essence used to develop a sense of well being in an animal under stress. Spray into an animal's mouth/face during delivery to alleviate anxiety.

**Wound Balm** is an all-natural healing ointment containing over 70 minerals in colloidal form. It works great for soothing skin stressed from gestational abdominal expansion. It can also be applied to the navel post delivery to deter infection and promote healing.

**Wound Salve** is an all natural blend of herbs, oils and beeswax for cuts and skin disorders. It forms a thin and breathable "liquid bandage" that is non-toxic and can be licked by any animal with no side effects. This also works great for post delivery navel application.

**Hiscorbadyne®** can strengthen blood vessels, especially important for animals with a history of bleeding during or after delivery.

**Release™** is a natural flower essence topical spray, & an excellent relief for the strains and cramps of labor. It can be used post delivery to relieve sore joints, udders, breast, muscles or any other area of the body.

**Tea Tree Oil** is a natural antiseptic and anti-fungal oil that helps protect and condition the post-partem navel.
