## DYNAMITE® DOES Make a Difference!

My great friend, Cheyenne started with allergies about 3 years ago when I still lived in New Zealand. He had bumps all over him that seemed very irritating. Cortisone cream helped, but I hesitated to use too much and certainly did not want to continue it for a long period of time. A company in FL had a solution that seemed to work on the bumps but not on the underlying allergy; also, it was almost impossible to get it down to the skin.

I moved to Pagosa Springs in the summer of 2003 with my horses arriving in November. I had heard of DYNAMITE®, emailed the company and they put me into contact with Rowan Emrys; I signed up under her as a DYNAMITE® distributor in October, 2004. Even though she made no promises, she did say that the whole basic program would probably help and that the **Izmine™** in particular seemed to be almost a given in skin situations.

Well, I'm here to tell you that Cheyenne, less than 3 months later, is totally "bump" free! Cheyenne has access to his four **Free Choice™** minerals and gets **Dyna-Pro™** and **DYNAMITE® Vitamin & Mineral Supplement** with about 1 scoop **Izmine™** mixed with applesauce mixed into his oats to sort of jump-start him. Is he ever happy! And if Cheyenne is happy, then I am happy, too!

### Cheyenne

### Fabulous Fabio

"Fabio" was plagued with the runs for well over a year. His owner questioned many people about it and they all came to the consensus that it was just the way he was. That is, until she met me.

I questioned her thoroughly about his "condition." Cow patties from a horse just aren't normal and neither is "juicy" gas! I asked if my friend minded me calling and questioning my upline about the issue at hand. She said she was open to anything. She hated that her horse's tail was disgusting to say the least and it troubled her that he was in ill condition both inside and out. My upline, Rowan Emrys, carefully listened to Fabio's symptoms and suggested that we may have an intestinal irritation. She suggested DYNAMITE'S® **Miracle Clay** and **Dyna-Pro™** for a few weeks and then we would re-evaluate. I gave the products to my friend on January 1, 2005. She began feeding it immediately and a week later started him on the full DYNAMITE® **Basic program** along with 1/4 cup of **High Energy Supplement™(H.E.S.)** per day to aid in some possible insulin resistance/Pre-Cushings.

Last Wednesday, we went for a ride to Black Forest Regional Park. There are quite a few hills and when the weather is right it's a great place to fit up horses and take in the scenery. Before, on any given day, no matter the grade of the hill, this poor gelding would have to stop at least once if not more to catch his air. He had been on his DYNAMITE® regime for less than two weeks and was able to trot and canter those hills without stopping! His endurance is beginning to increase as the amount of good calories he's taking in are beginning to be better utilized! Also, no more cow patties or "juicy" gas, and Fabio already looks fuller through his hip area. Previously, he was somewhat sunken in and almost egg shaped when you looked at him head on, rather like he was a pregnant mare ready to foal!

My friend is so happy with his progress thus far; I can't believe the difference DYNAMITE® has made in such a short amount of time!
