What a terrific all-purpose product!

- As a liver and/or intestinal cleanse, especially for horses that are a bit dull or hard keepers, take them off **Regular** or **Plus** and just do 30 days of **Excel** at 1 tsp per day along with their 4 **Free Choicers**, free choice grass hay and daily **PGR** or **HES** ration.
- A Dutch Warmblood breeder has **Excel** milled into her feed at the rate of 2# per ton, and feels that it enhances feed utilization.
- If a horse has just come off the track or has been under a lot of stress and heavily medicated or overloaded with supplements, **Excel** is a great choice for 30 days, as above, before starting on the original **Dynamite** or **Plus**.
- Used on a daily basis of just ½ teaspoon per day for a 1000# horse, it has been shown to be superb in parasite control (moisten grain lightly with a bit of water to be sure the **Excel** will “stick”) and far better, in our opinion, than daily deworming with chemicals
- We consider **Excel** a “must” (at 1 tsp/daily for 30 days) for foundered horses.
- As for its cost-effectiveness, there are 30 grams in 1 oz and 4 grams in 1 tsp; therefore one jar will last you 112 days (app. 3½ months) if you feed 1 tsp/day and 224 days (app. 7 mos.) if fed at ½ tsp/day. We think that is an incredible bargain whether you are buying it wholesale or retail considering all it can do!
- By the way, it is a component of the 6-in-1 **TNT** pellet; just another reason those “magic” black pellets work so darn well!
- A Director in Alberta, says that **Excel** knocks out bloody scours in calves in 1 to 2 days; he puts a teaspoon on their tongues or in the milk.
- And a Connecticut dairy, whose Tiffany Farms has been in the family since the mid-1800’s, has **Excel** milled into their milking pellets at the rate of 2.5#/ton which equals about ¾ tsp per cow. Since starting that, their somatic cell count went down from 310,000 to only 140,000, their butter fat went up to 4.0% (they say very high for Holsteins), and all the cows are showing stronger signs of estrus. They also are feeding **Vitamin/Mineral Mix for Browsers & Grazers**, **DynaPro**, and **Breeder Pac** (when super ovulating for surrogate fetal implantation) and are thrilled with the results!
- **Excel** is also great for goats, especially milk goats.
- Can be used for dogs and cats, too, for the same purposes as horses, etc.
- We have also used it quite successfully for humans, too, as a liver support/cleanse, etc—some people have just taken the powder either straight, in water/juice, or in a favorite food, but most simply put it into empty gel caps available at most pharmacies or health food stores. ■
